Prepare your organisation for the escalating cyber risk
All modern organisations hold sensitive information and rely on information technology. They are at growing risk from cyber attacks. The World Economic Forum describes this as one of the biggest risks that businesses will face in the next decade. However, the potential impact of cyber attacks on individual businesses or organisations is not always understood or is underestimated.

Risk not compliance
A compliant organisation is not always a secure one. Compliance against standards designed for a generic organisation will not address the risk to any particular business very effectively. ‘Ticking the boxes’ for security often leads to poor focus and unnecessary cost. By aligning security with the risks faced a business can tailor spend and effort to priority areas.

Shareholder and client demand
Security is not just a concern for businesses themselves. There is now a growing demand for security from customers, partners and shareholders as data breaches and privacy concerns remain headline news.
An independently endorsed position is more valuable than ever to reassure clients, regulators and the wider public that security is taken seriously.
Many organisations spend inefficiently.

You can identify savings over one-size-fits-all approaches to security.

You can reduce risk by focusing your existing spend on the risks most significant to your business.

You can select the optimum trade-off of risk against spend.

Solution

– We work with you to identify, evaluate and prioritise the risks that are specific to your organisation. These are based on an understanding of your business, direct technical analysis of your organisation’s key systems and our operational monitoring of today’s cyber threat environment.
– We work with you to make active business decisions on how much risk you want to accept and how best to deploy your resources. This is supported with scenarios illustrating why and how your organisation is at risk and a business case that sets out options for reducing your risk and rationalising your spend.
– We work with you to develop a roadmap to deliver the benefits and savings identified.

Features

– A repeatable methodology based on 40 years experience helping protect the UK’s most valuable information.
– Maturity assessment of current security arrangements against ISO27002, PCI-DSS, CoBIT5, Cloud Security Alliance and other appropriate standards.
– Threat assessment based on current, hands-on experience of advanced attacks on the networks of many other organisations.
– Unrivalled technical capabilities that provide direct evidence on the scale of the business risk in your organisation.
– An approach that helps you choose the appropriate level of security for your organisation.

Benefits

– Your organisation will be more resilient to the growing cyber threat.
– You will understand the level and shape of the risk your organisation faces.
– You will identify cost savings and know that you are spending your security budget wisely.
– You will know how your organisation compares with others in your sector and beyond.
– You will show others that you can be trusted.

A Cyber Risk Assessment gives you the power to choose.

1. Many organisations spend inefficiently.
2. You can identify savings over one-size-fits-all approaches to security.
3. You can reduce risk by focusing your existing spend on the risks most significant to your business.
4. You can select the optimum trade-off of risk against spend.
